iNAP DATA/HEALTHCARE EXCHANGE

The iNAP Healthcare Exchange will lower costs for Hospitals and Healthcare Organizations while improving data security and application performance.

The INAP Exchange addresses the specific needs of the healthcare industry and offers a **unique** approach to implement secure "wide-area" solutions to ensure that the transmission of personal healthcare information remains secure. The iNAP approach to the healthcare market **combines applications** required by care organizations into a cohesive, powerful but economic service mix that **eliminates waste**. We can apply solutions tailored to your organization's unique requirements without the higher cost of additional service charges.

FAST Ethernet, NOT Internet

The INAP Exchange provides a Gigabit Ethernet switching core and matching complementary infrastructure support. iNAP customers can access electronic medical records and business continuity bandwidth, real-time patient data, collaborative partners, service providers, and insurance payors on a faster, more secure and less costly network. Commercial internet can be accessed over your iNAP connection as well. **What does this mean for you?!**

Data Security

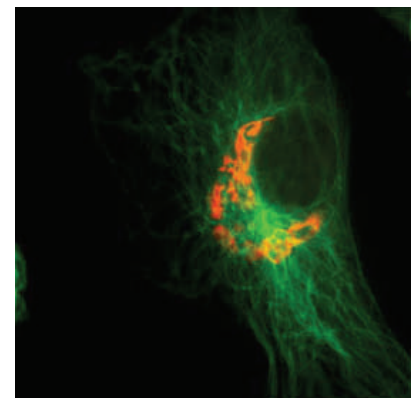

We have worked with the largest and fastest speed networks in the world to provide our clients with the best in breed data security. Employing both physical and logical security to closed user groups that **surpasses current HIPAA compliant solutions**.

MPLS+

Regardless of the data or video application, the iNAP supports it. We designed iNAP by imitating the networks that currently develop the technology and applications serving healthcare today. The iNAP Healthcare Exchange is ready to support applications and application performance that will be introduced to commercial markets over the next few years.

Telemedicine

iNAP Healthcare Exchange can connect urban hospitals and healthcare organizations to rural hospitals and clinics. Critical care resources are connected over high speed, private and secure channels to **provide collaborative care** when a patient needs a **real-time** second diagnosis from an expert located many miles away.

ISI iNAP LLC
16W235 83rd Street
Burr Ridge, IL 60527

E-mail: info@ngnap.com

iNAP Healthcare Exchange connects the care givers and their suppliers without the need to buy all the extras.

Electronic Medical Records Transfers

Standardized methods are evolving to facilitate records transfers that take seconds rather than weeks. The iNAP HX provides the infrastructure necessary to support this advance.

Healthcare Service Providers

IT and Applications Service Providers now *host core operational* and niche *software applications* needed in today's most advanced radiology treatments and diagnostic applications. The ability to effectively access these remotely hosted applications through iNAP HX will *accelerate deployment* of innovative programs; reduce the cost of employing new technologies; and help avoid costly application obsolescence. Additionally, by bringing a *multitude of application providers together in one connection*, healthcare providers now can make more informed, comparative decisions between providers and benefit from enhanced competitive pressure on service provider pricing.

Insurance Settlement

Why wait? How much staff does it take to collect the fees your organization has already earned. The cost and time of the collection process can be reduced, and your firms *financial management improved* through the lower cost and more efficient connections to both insurers and competitive outsource processing firms that can be provided through the iNAP HX.

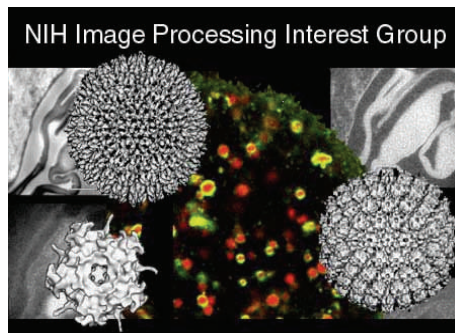

Continuing Medical Training and Education

Teaching hospitals and medical schools want to make their expertise and specialized offerings more widely available. The iNAP Healthcare Exchange provides the *conduit connecting this knowledge to those seeking to obtain it*. We are working with the most innovative institutions to provide iNAP HX users the *latest medical and technological advances in real-time digital media*.

Additional Resources

- Enrollment into iNAP's repository of peering contacts and policies
- Access to iNAP's Gigabit Peering Forum where industry leaders meet to discuss the various benefits and arrangements for peering at the iNAP
- Assistance from iNAP peering community to optimize peering arrangements
